Description

The CoolRunner™ XPLA3 XCR3384XL device is a 3.3V, 384 macrocell CPLD targeted at power sensitive designs that require leading edge programmable logic solutions. A total of 24 function blocks provide 9,000 usable gates. Pin-to-pin propagation delays are as fast as 7.0 ns with a maximum system frequency of 135 MHz.

TotalCMOS Design Technique for Fast Zero Power

CoolRunner XPLA3 CPLDs offer a TotalCMOS™ solution, both in process technology and design technique. These CPLDs employ a cascade of CMOS gates to implement their sum of products, instead of the traditional sense amp approach. This CMOS gate implementation allows Xilinx to offer CPLDs that are both high performance and low power, breaking the paradigm that to have low power, you must have low performance. Refer to [Figure 1](#) and [Table 1](#) showing the I_{CC} vs. Frequency of our XCR3384XL TotalCMOS CPLD (data taken with 24 resettable up/down, 16-bit counters at 3.3V, 25°C).
